

Prioritized UGO candidates strengthened by independent lotus and ginger rhizome evidence

OG0000652 → OG0000387 XTH / xyloglucan cell-wall remodeling	5	0	3	0	15	A plus core stable with lotus or ginger
OG0001146 → OG0000729 Early nodulin-like meristem/regrowth candidate	0	4	1	1	13	A supported main text candidate
OG0001645 → OG0000665 bHLH-like transcriptional regulator	0	3	0	4	12	A plus core stable with lotus or ginger
OG0002065 → OG0004093 MYB-like transcriptional regulator	0	2	0	1	7	A core supported but OG split
OG0004847 → OG0000885 bHLH-like transcriptional regulator	0	2	0	3	9	A supported main text candidate
OG0004874 → OG0004936 Non-symbiotic hemoglobin / stress-resilience candidate	0	2	1	0	8	A supported main text candidate
OG0007321 → OG0006254 Carotenoid cleavage dioxygenase / hormone-related regulation	0	0	0	0	2	B no new lotus ginger support
OG0006308 → OG0003573 NAC-like transcriptional regulator	0	0	0	0	3	B no new lotus ginger support
	Lotus high	Ginger high	Lotus moderate	Ginger moderate	Benchmark evidence	

6/8 prioritized candidates gained high-confidence lotus or ginger rhizome support. Cell values show raw gene counts or benchmark evidence score.
